The invention discloses a polymucleotide comprising a sequence selected CC from 1970 fully defined nucleotide sequences which encode novel CC polypeptides. Also claimed is a polypeptide encoded by the polymucleotide CC or its partial peptide, a mantibody binding to the polypeptide or peptide of the polymucleotide, immunologically assaying the polypeptide or peptide of peptide of the polymucleotide by contacting the polypeptide or peptide with the antibody of the encoded protein, and observing the binding CC with the antibody of the encoded protein, and observing the binding CC between the two, a transformant carrying the polymucleotide in an CC expressible manner and an antisense polymucleotide. The oligonucleotide is as a probe CC for detecting the polymucleotide. The polymucleotide and encoded CC proteins are useful as pharmaceutical agents and many disease-related CC genes may be included in them, for developing a diagnostic marker or CC effects for regulation of their expression and activity, or as targets CC regeneration. Membrane proteins, signal transduction-related proteins, of developing and civity or as targets CC encoding them can be used as indicators for diseases (e.g. osteoporosis, concer, tumours. The cDNA may be used to regulate the activity or expression of the encoded protein to treat diseases. The CC sequence presented is a cDNA of the invention. Note: Some of the sequence is based on sequence information supplied by the European Patent Office.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 1; Page; 222pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New polynucleotides and polypeptides, useful for developing marker or medicines for regulation of their expression and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              as targets of gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         WPI; 2003-450961/43.

                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to human polypeptides, termed NOVX, and the polypucleotides encoding them. The polypeptides and polypucleotides are useful for diagnosing disease, and screening for potential therapeutic agents. The sequences are useful for treating metabolic disorders, cardiomyopathy, diabetes, hypertension, congenital heart defects, aortic stenosis, atrial septal defect (ASD), atrioventricular canal defect, ductus arteriosus, pulmonary stenosis, subaortic stenosis, ventricular septal defect (VSD), valve diseases, tuberous sclerosis, scleroderma, atherosclerosis, obesity, infectious disease, anorexia, neurodegenerative disorders, Alzhelmer's disease, Parkinson's disease, immune disorders, haematopoietic disorders, haematopoietic disorders, haemophilia, hypercoagulation, Crohn's disease polynucleotides of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    27-APR-2001;

INC.

Claim 12; SEQ ID NO 20; 142pp; English.

This invention relates to novel drug metabolising enzymes (DME) and the nucleotide sequences which encode them. The invention may be useful for the development of compounds with a cytostatic, immunosuppressive, antiinflammatory, endocrine, ophthalmological, gastrointestinal or hepatotropic activity acting as an agonist or antagonist of drug metabolising enzyme activity. The invention may be used in the diagnosis and treatment of disorders associated with decreased or increased expression or activity of drug metabolising enzymes. Such disorders expression or activity of drug metabolising enzymes. Such disorders include cancer, cell proliferative disorders, autoimmune/inflammatory, endocrine, eye, gastrointestinal (including liver disorders) and metabolic disorders. The present sequence is that of a gene which encodes a human drug metabolising enzyme (DME) of the invention. Note: This sequence did not form part of the printed specification but was obtained in electronic format from EPO.

The coding sequences are useful in the gene therapy of diseases caused by abnormalities of the proteins, e.g. cancer, inflammatory diseases, osteoporosis or neurological disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 1962 BP; 428 A; 541 C; 473 G; 520 T; 0 U; 0 Other;

```
The present sequence encodes a cat cauxin protein (I) or its salt, which CC is cat kidney disease marker. Also described: (I) a partial peptide (II) cof (I); (2) a nucleic acid (III) encoding (I) or (II); (3) a vector (IV) CC comprising (III); (4) a transformed host (V) comprising (III) or (IV); (CC comprising (III) or (II) by culturing (V); (6) a antibody (VI) which CC couples specifically with (I) or (II); (7) diagnosing cat kidney disease CC which involves measuring (I) quantitatively, and where reduction of CC amount of (I) indicates presence of the disease; (8) a cat kidney disease CC diagnostic agent comprising (I) labelling agent, a reagent which measures CC the biological activity of urinary (I) or (VI); and (9) a cauxin CC cat kidney disease marker and (VI) is useful for diagnosing cat kidney CC disease. (I) provides an early marker for the disease, and replaces CC complicated diagnostic methods such as X-ray imaging, ultrasonic imaging,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

                                                                                                                                                     ঠ
                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                       5
                                                                                                                                                                                                                                                                                                                                                                                                                           CC The present sequence encodes a cat cauxin protein (I) or its salt, which CC is cat kidney disease marker. Also described: (I) a partial peptide (II) CC of (I); (2) a nucleic acid (III) encoding (I) or (II); (3) a vector (IV) (CC comprising (III); (4) a transformed host (V) comprising (III) or (IV); (CC comprising (II) or (II) by culturing (V); (6) a antibody (VI) which CC couples specifically with (I) or (II); (7) diagnosing cat kidney disease (CC which involves measuring (I) quantitatively, and where reduction of CC amount of (I) indicates presence of the disease; (8) a cat kidney disease (CC diagnostic agent comprising (I) labelling agent, a reagent which measures CC the biological activity of urinary (I) or (VI); and (9) a cauxin CC cat kidney disease marker and (VI) is useful for diagnosing cat kidney CC cat kidney disease marker and (VI) is useful for diagnosing cat kidney CC correctly. (I) provides an early marker for the disease, and replaces CC complicated diagnostic methods such as X-ray imaging, ultrasonic imaging, CC blood testing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          δ

CC cytostatic, vulnerary, antiparteriosclerotic, antiparkinsonian, nootropic, CC neuroprotective, immunosuppressive, haemostatic, antiinflammatory, CC cardiant, antiulcer, virucide, antithyroid, cerebroprotective, anorectic, CC and metabolic. Polypeptides and polymucleotides of the invention are CC useful in the treatment, or as a vaccine in the prevention of, cancer, CC wound healing disorders, infection, atherosclerosis, Parkinson's disease CC and Alzheimer's disease, autoimmune disorder, haematopoletic disorder, and Alzheimer's disease, autoimmune disorder, haematopoletic disorder, CC inflammation, neoplastic diseases, nervous system related disorders and CC cardiovascular disorders, pancreatitis, respiratory disorder, CC hyperproliferation, systemic autoimmune disease, hyper-immunity, CC developmental abnormality, gastrointestinal ulceration, neuropathy, CC developmental diseases, metabolic diseases, sperm dysfunction, thyroid CC disorders e.g. hypothyroidism, brain damages, colitis, cone photoculation deficiency, neurological diseases, stroke, angiogenesis, CC covulation disorders, diseases in the spinal cord, thyroid gland, heart, CC crachea, thymus, lymph node and muscular system, obesity, anorexia, CC growth abnormalities, and alleviation of precocious puberty. The The invention relates to an isolated polypeptide with signal sequences which allow it to be secreted extracellularly or membrane associated. The activity of polypeptides of the invention may be described as, sequences given in records ABQ86130-ABQ86184 represent novel human cDNA's

Sequence 1071 BP; 242 A; 286 C; 254 G; 289 T; 0 U; 0 Other;

```

The present invention relates to a polypeptide-human carboxylatase-24.64, the polynucleotide for coding it, the process for preparing the polypeptide by DNA recombination, the application of the polypeptide in treating diseases such as primary hypertension, digestive ulcer, nephrotic, bronchial asthma, tremor, etc., the antagon of the polypeptide and its medical action, and the application of the polynucleotide are new. The present sequence represents human carboxylatase 24.64 encoding

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
disease, such as organophosphorus intoxication, cancer and osteoporosis. Compounds that increase the ability of human carboxylesterase-like enzyme to bind to organophosphorus compounds are useful as detoxifying agents. Carboxylesterase-like enzyme agonists and antagonists are useful for treating osteoporosis, Paget's disease and degradation of bone implants, particularly dental implants. Carboxylesterase-like enzyme is useful in diagnostic assays for detecting diseases and abnormalities or susceptibility to diseases or abnormalities related to the presence of mutations in the nucleic acid sequences which encode the enzyme. The coding sequence of carboxylesterase-like enzyme polynucleotide is useful in gene therapy and for generating antisense oligonucleotides or ribozymes which specifically bind to mRNA transcribed from carboxylesterase-like enzyme DNA. These antisense oligonucleotides are
                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a purified human carboxylesterase-like enzyme polypeptide. Carboxylesterase-like enzyme and its DNA are useful for screening for agents which decrease or modulate the activity of carboxylesterase-like enzyme polypeptide. Carboxylesterase-like enzyme useful for treating a carboxylesterase-like enzyme dysfunction related useful for treating a carboxylesterase-like enzyme dysfunction related
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; carboxylesterase-like enzyme; organophosphorus intoxication; gen osteopathic; gene therapy; osteoporosis; antisense therapy; cytostatic; detoxifying agent; Paget's disease; bone implant degradation; cancer;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

ALIGNMENTS

Human carboxylesterase family member 53010

23-SEP-2002 ABB79537;

(first entry)

ABB79537 standard; protein;

581 AA

Carboxylesterase; enzyme; human; analgesic; nootropic; antiinflammatory;

diagnosis; therapy.

                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence is the protein sequence of human 53010, a novel CC protein containing the structural characteristics of a carboxylesterase CC family member. The invention provides 53010 nucleic acids, antisense CC molecules, expression vectors, host cells, transgenic animals, 53010 CC proteins, fusion proteins, antigenic peptides, anti-53010 antibodies and CC methods for detecting the presence of 53010 polypeptides or nucleic acids, of identifying a compound that binds to the 53010 polypeptide, and CC controlling the activity of the polypeptide. The 53010 polypeptide and CC nucleic acids can act as novel diagnostic and therapeutic agents for CC controlling disorders involving aberrant or deficient hydrolysis of CC carboxylic esters. As 53010 mRNA is highly expressed in the central and CC pain models, 53010 molecules can also act as novel diagnostic targets and CC therapeutic agents for controlling neurological disorders, such as pain-CC (especially a pain-related disorder) characterised by aberrant activity of a 53010 expressing cell involves administering a compound that CC modulates 53010 activity or expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  53010 nucleic acids, useful for diagnosing and treating e.g. vascular diseases, autoimmune diseases, or neurodegenerative diseases, as surrogate markers, in tissue typing and chromosome mapping.

The present invention describes the use of polypeptides related to urological disorders for identifying a compound capable of treating a urological disorder, identifying a subject having a urological disorder, or treating a subject having a urological disorder. Also described: (1) method for identifying a compound capable of treating a urological disorder; (2) a method for identifying a subject having a urological
                                                                                                                                      Use of polypeptides related to urological disorders, e.g. 44390, 5. 211 or for identifying a compound capable of treating a urological disorder or identifying and treating a subject having a urological disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   WO2004065576-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    urological

The compound has uropathic and cytostatic activities. The polypeptides related to urological disorders are useful for identifying a compound capable of treating a urological disorder, identifying a subject having a urological disorder, or treating a subject having a urological disorder. Disorders include urinary incontinence and benign prostatic hyperplasia. The present sequence represents a human urological disorder related protein, which is used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                related protein, invention.

Secreted proteins and polynucleotides useful as vaccines for preventing or treating various diseases e.g. cancer, wounds, atherosclerosis, parkinson's disease, Alzheimer's disease, infection, autoimmune disorder.

Claim 1(a); Page 312-313; 335pp; English.

CC The invention relates to an isolated polypeptide with signal sequences CC which allow it to be secreted extracellularly or membrane associated. The CC activity of polypeptides of the invention may be described as, cotypostatic, vulnerary, antiarteriosclerotic, antiparkinsonian, nootropic, CC neuroprotective, immunosuppressive, heemostatic, antiparkinsonian, nootropic, CC cardiant, antiulcer, virucide, antityroid, cerebroprotective, anorectic, cardiant, antiulcer, virucide, antityroid, cerebroprotective, anorectic, CC useful in the treatment, or as a vaccine in the prevention are CC useful in the treatment, or as a vaccine in the prevention of, cancer, wound healing disorders, infection, atherosclerosis, Parkinson's disease CC and Alzheimer's disease, autoimmune disorder, haematopoietic disorder, inflammation, neoplastic diseases, nervous system related disorders and CC cardiovascular disorders, pancreatitis, respiratory disorders, thyperproliferation, systemic autoimmune disease, hyper-immunity, CC haematological diseases, mervous system related content, thyroid developmental abnormality, gastrointestinal ulceration, neuropathy, cancers experimental diseases, mervous system related the property of the cardiovascular diseases, mervous system related disorders, and cardiovascular diseases, mervous system related disorders, thyperproliferation, systemic autoimmune disease, hyper-immunity, cc developmental abnormality, gastrointestinal ulceration, neuropathy, that disorders e.g. hypothyroidism, brain damages, colitis, cone photo-

Novel human drug metabolizing polypeptide, useful in diagnosis, prevention or treatment of autoimmune/inflammatory, cell proliferative, neurological, developmental, endocrine, metabolic and gastrointestinal

Claim 65; Page 155-156; 169pp; English.

The invention relates to an isolated human drug metabolising enzyme (DME)
CC and its nucleotide. DME is useful for diagnosing, treating or preventing
CC disorders associated with aberrant expression of DME, where the disorders
CC are selected from autoimmune/inflammatory disorder such as acquired
CC unventis; a cell proliferative disorder such as arteriosclerosis,
CC cirrhosis, hepatitis, and cancer; a neurological disorder such as
CC Alzheimer's disease, Huntington's disease, dementia, Parkinson's disease;
CC alzheimer's disease, Huntington's disease, dementia, Parkinson's disease;
CC alzheimer's disease, Huntington's disease, dementia, Parkinson's disease;
CC anaemia; an endocrine disorder such as adenoma, thrombosis and infections
CC anaemia; an endocrine disorder such as adenoma, thrombosis and infections
CC is ne eye disorder such as conjunctivitis, glaucoma, cataract; metabolic
CC disorder such as anorexia, peptic ulcer; and liver disorders. DME is
CC useful in a number of drug screening techniques and to analyse the
CC proteome of a tissue or cell type. The invention is useful for creating

A CC polynucleotide of the invention may have a use in gene therapy. The human CC diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be used to diagnose a particular condition, disease or disorder associated CC with human molecules, e.g. cell proliferative disorder, endocrine autoimmune/inflammatory disorders, developmental disorder, endocrine CC disorder, neurological disorders, gastrointestinal disorders, or CC infections caused by virus, bacteria, fungi or parasite. The dithp CC molecules may also be used in genetic mapping, in identifying individuals CC from minute biological samples, in detecting single nucleotide polymorphisms, as molecular weight markers, and for somatic or germline CC gene therapy. The present sequence represents a dithp protein of the CC invention. Note: The sequence represents a dithp protein of the printed specification, but was obtained in electronic format directly cc from WIPO at www.wipo.int/pct/en/sequences/listing.htm

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to an isolated polypeptide with signal sequences CC which allow it to be secreted extracellularly or membrane associated. The CC extractic, vulnerary, antiarteriosclerotic, antiparkinsonian, nootropic, neuroprotective, immunosuppressive, haemostatic, antiinflammatory, CC cardiant, antiulcer, virucide, antithyroid, cerebroprotective, anorectic, and metabolic. Polypeptides and polymucleotides of the invention are useful in the treatment, or as a vaccine in the prevention of, cancer, CC wound healing disorders, infection, atherosclerosis, Parkinson's disease and polymucleotides, harkinson's disease, autoimmune disorder, haematopoietic disorder, inflammation, neoplastic diseases, nervous system related disorders and cardiovascular diseases, pancreatitis, respiratory disorder, hyperproliferation, systemic autoimmune disease, hyper-immunity, CC developmental abnormality, gastrointestinal ulceration, neuropathy, haematological diseases, metabolic diseases, stroke, angiogenesis, CC developmental abnormality, brain damages, colitis, cone phototransduction deficiency, neurological diseases, stroke, angiogenesis, CC valation disorders, diseases in the spinal cord, thyroid gland, heart, CC trachea, thymus, lymph node and muscular system, obesity; anorexia, CC trachea, thymus, lymph node and muscular system, obesity; anorexia, CC proteins of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Secreted proteins and polynucleotides useful as vaccines for preventing or treating various diseases e.g. cancer, wounds, atherosclerosis, Parkinson's disease, Alzheimer's disease, infection, autoimmune disorder
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 581
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 1(a); Page 313-314; 335pp; English.

New isolated NOVX polypeptide useful for treating atherosclerosis, metabolic disorders, diabetes, obesity, infectious disease, anorexia, neurodegenerative disorders, Alzheimer's disease and cancer.

Claim 1; Page 303; 666pp; English

The invention relates to human polypeptides, termed NOVX, and the polypurcleotides encoding them. The polypeptides and polynucleotides are useful for diagnosing disease, and screening for potential therapeutic agents. The sequences are useful for treating metabolic disorders, cardiomyopathy, diabetes, hypertension, congenital heart defects, actic tenosis, atrial septal defect (ASD), atrioventricular canal defect, ductus arteriosus, pulmonary stenosis, subaortic stenosis, ventricular septal defect (VSD), valve diseases, tuberous sclerosis, scleroderma, atherosclerosis, obesity, infectious disease, anorexia, neurodegenerative disorders, Alzheimer's disease, Parkinson's disease, immune disorders, haematopoietic disorders, haemophilia, hypercoagulation, Crohn's disease and cancer. Sequences ABUS4542-ABUS4647 represent human NOVX polypeptides invention

The invention may be useful for the development of compounds with a cytostatic, immunosuppressive, antiinflammatory, endocrine, ophthalmological, gastrointestinal or hepatotropic activity acting as an agonist or antagonist of drug metabolising enzyme activity. The invention may be used in the diagnosis and treatment of disorders associated with decreased or increased expression or activity of drug metabolising enzymes. Such disorders include cancer, cell proliferative disorders, autoimmune/inflammatory, endocrine, eye, gastrointestinal (including liver disorders) and metabolic disorders. The present sequence is that of a human drug metabolising enzyme (DME) of the invention. Note: This sequence did not form part of the printed specification but was obtained in electronic format from EPO.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Azimzai Y,

                                                                              The invention discloses a polynucleotide comprising a sequence selected from 1970 fully defined nucleotide sequences which encode novel control of the polynucleotide. Also claimed is a polypeptide encoded by the polynucleotide or peptide or peptide or peptide of the polynucleotide, immunologically assaying the polypeptide or peptide of the polynucleotide, immunologically assaying the polypeptide or peptide of the polynucleotide by contacting the polypeptide or peptide with the antibody of the encoded protein, and observing the binding compared the two, a transformant carrying the polynucleotide in an expressible manner and an antisense polynucleotide. The oligonucleotide is useful as a primer for synthesising the polynucleotide, or as a probe contacting the polynucleotide and encoded control of the polynucleotide and encoded control of the polynucleotide in the proteins are useful as pharmaceutical agents and many disease-related control of their expression and activity, or as targets of genes may be included in them, for developing a diagnostic marker or confidence therapy. The genes are involved in tissue and/or cell confidence therapy. The genes are involved in tissue and/or cell concording them can be used as indicators for diseases (e.g. osteoporosis, encoding them can be used as indicators for diseases (e.g. osteoporosis, concurological disease, cancer, tumours. The cDNA may be used to regulate the activity or expression of the encoded protein to treat diseases. The sequence presented is a protein of the invention. Note: Some of the sequence data for this patent is not represented in the printed concern parent office.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Isogai T, Suy-, Yamamoto J, Isono Y

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
The present sequence represents a cat cauxin protein (I) or its salt, which is cat kidney disease marker. Also described: (I) a partial peptide (II) of (I); (2) a nucleic acid (III) encoding (I) or (II); (3) a vector (IV) comprising (III); (4) a transformed host (V) comprising (III) or (IV); (5) producing (I) or (II) by culturing (V); (6) a antibody (VI) which couples specifically with (I) or (II); (7) diagnosting cat kidney disease which involves measuring (I) quantitatively, and where reduction of amount of (I) indicates presence of the disease; (8) a cat kidney disease diagnostic agent comprising (I) labelling agent, a reagent which measures the biological activity of urinary (I) or (VI); and (9) a cauxin

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              detection kit which measures cauxin in a test sample. (I) is useful as a cat kidney disease marker and (VI) is useful for diagnosing cat kidney disease. (I) enables detection of cat kidney disease simply and correctly. (I) provides an early marker for the disease, and replaces complicated diagnostic methods such as X-ray imaging, ultrasonic imaging, blood testing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 542
